- Access on Android Gadgets (Mobile/Tab)
- Cloud computing and security
- External Quick menu access and report designer
- API Integration for online fee payments
- Bar coded library and Inventory Transaction
- Instant ID Cards and Pass generation

IMPLEMENTATION
Prepare the infrastructure. To have the best output of an ERP Solution in an educational institute we need to have a comprehensive evaluation of the existing IT & supporting infrastructure such as hardware, software, communications, LAN, internet, OS, server etc.

Convert the data. Data conversion, changing data from one format to another, needs to take place once the infrastructure and the solution are implemented.

Monitor the solution. Usually our team will spend some period of time monitoring the implemented solution. If there are problems that come up immediately after implementation, the project team should address and fix them.
